PWA suggestions for improvement

Current note : **see per title**

INSTALLABLE : **1/1**

no further improvement is required at this stage.

PWA OPTIMIZED : **4/5**

Content is sized correctly for the viewport:

- o Issue: The content of the application is not optimally sized for the viewport, possibly leading to a suboptimal user experience on different devices.
- o Solution: Adjust the CSS styling to ensure that the width of the app's content matches the width of the viewport. Verify that the meta viewport tag is correctly configured with appropriate width or initial-scale attributes.

Manifest doesn't have a maskable icon:

- o Issue: The manifest file lacks a maskable icon, impacting the visual appeal and fitting of the app icon on various devices.
- o Solution: Create a maskable icon for your PWA manifest. Ensure that the icon fills the entire shape without being letterboxed, providing a consistent and visually pleasing appearance when users install the app on their devices. Update the manifest file accordingly.
